

Rentokil **DEADLINE® MOUSE BLOCKS**

STATUTORY CONDITIONS RELATING TO USE

FOR USE ONLY BY PROFESSIONAL OPERATORS.
FOR USE ONLY IN MOUSE CONTROL BY PROFESSIONAL OPERATORS.

Application rate: apply as necessary.

The (COSHH) Control of Substances Hazardous to Health Regulations 2002 may apply to the use of this product at work.

PREVENT ACCESS TO BAIT by children, birds and non-target animals particularly dogs, cats, pigs and poultry.

Search for and remove rodent bodies at frequent* intervals during treatment (unless used in sewers). Collect and dispose of the remains of bait and any remaining rodent bodies after treatment (unless used in sewers). You must ensure that you comply with legislation regarding the correct disposal of waste. For further guidance, contact the Environment Agency or your local Scottish Environment Protection Agency (SEPA) office. (*Intervals will vary depending on formulation and treatment regime; therefore the user should refer to and comply with the manufacturer's guidelines).

DO NOT PLACE BAIT where food, feed or water could become contaminated.

AVOID ALL CONTACT BY MOUTH.

This material and its container must be disposed of in a safe way.

HARMFUL TO WILDLIFE.

READ ALL PRECAUTIONS BEFORE USE.

HSE 7178

PRECAUTIONS

To avoid risks to man and the environment, comply with the instructions for use.

WASH HANDS AND EXPOSED SKIN before meals and after use.

Keep container tightly closed. Keep only in the original container.

KEEP IN A SAFE PLACE.

In case of accident or if you feel unwell seek medical advice immediately

(show the label where possible).

Where appropriate, secure the bait block at its placement site to reduce the likelihood

of its removal by rodents.

Wild mammals and birds may be at greater risk if this product is not used in accordance with the label.

STORE IN A COOL, DRY PLACE.

PROTECT FROM FROST

BATCH No.

DIRECTIONS FOR USE

Deadline Mouse Blocks are ready to use bait blocks for use in the control of mice indoors and outdoors.

Place 1-2 blocks (10-20g of bait) per bait box or in well protected situations, at frequent intervals i.e. about 3 metres where mice are running and feeding.

To increase the likelihood of bait take, it is particularly important to ensure that the availability of alternative food sources are minimised at the onset of treatment.

Always position baits well so as to protect from the prevailing weather and to prevent access by humans, domestic animals and wildlife.

Inspect the baits at appropriate intervals and replace blocks until no more bait is taken.

Once the rodent population is completely controlled, do not place further rodenticide until a new infestation is identified.

NOTE TO DOCTOR

For further information contact your local National Poisons Information Centre. Bromadiolone is an indirect anticoagulant. Phytomenadione, Vitamin K1, is antidotal. Determine prothrombin times not less than 18 hours after consumption. If elevated, administer Vitamin K1 until prothrombin time normalises. Continue determination of prothrombin time for two weeks after withdrawal of antidote and resume treatment if elevation occurs in that time.

The resistance status of the target population should be taken into account when considering the choice of rodenticide to be used.
