

# MURIBROM NON-TOXIC WRAPPED BLOCK

HIGHLY PALATABLE NON-TOXIC WRAPPED MONITORING EXTRUDED BLOCKS

**5KG**  
20G WRAPPED BLOCK

*This wrapped, non-toxic, extruded block is ideal for use in damp conditions and locations that are prone to issues with slugs, snails and SPI. Each block is supplied in a plastic wrapper that protects the block from slugs, snails and SPI whilst still remaining palatable to rodents.*

## **DIRECTIONS FOR USE:**

Place blocks where there is risk of rodent activity, both inside and outside buildings. Place blocks throughout the treatment area. Only place one or two blocks securely at each monitoring point. Place more monitoring points than you would place toxic baiting points to obtain a good activity profile of the rodents.

Protect blocks from non-target animals and from water, preferably using commercially available bait stations. Fix the blocks in place just as you would for a toxic bait block. Make frequent inspections of the bait points.

Careful examination of chewed blocks can reveal whether they have been eaten by rats, mice or insects. Prepare your rodent control program and site according to the information gathered from the use of the non-toxic blocks. Unused or damaged blocks may be disposed of as non-toxic waste.

Nominal block weight 20g.
