NEOSOREXA® BAIT BLOCKS

Contains 0.005% w/w difenacoum.

A ready-to-use bait for the control of rats and mice.

STATUTORY CONDITIONS RELATING TO USE

FOR USE ONLY IN RODENT CONTROL BY PROFESSIONAL OPERATORS

For use indoors and outdoors

The (COSHH) Control of Substances Hazardous to Health Regulations 1999 may apply to the use of this product at work.

PREVENT ACCESS TO BAIT by children, birds and non-target animals particularly dogs, cats, pigs and poultry.

DO NOT PLACE BAIT where food, feed or water could become contaminated.

SEARCH FOR RODENT BODIES AND DISPOSE OF SAFELY (e. g. burn or bury). Do not dispose of in refuse sacks or on open rubbish tips.

REMOVE ALL REMAINS OF BAIT AND BAIT CONTAINERS AFTER TREATMENT AND DISPOSE OF SAFELY (e. g. burn or bury). Do not dispose of in refuse sacks or on open rubbish tips.

READ ALL PRECAUTIONS BEFORE USE

(PCS 90773)
(HSE 6775)

Neosorex[®] Bait Blocks are effective against mice and rats including strains resistant to some other anticoagulants. Two or more feeds are required to produce a delayed mortality (4-10 days): most rodents die in their burrows out of sight.

Neosorex[®] Bait Blocks contain Bitrex™ to help prevent accidental human consumption.

DIRECTIONS FOR USE

EXPLORE THE SITE locate runs, burrows, droppings, signs of damage. To increase the likelihood of bait takes, it is particularly important to ensure that the availability of other food sources is minimised at the onset of treatment.

BAITING FOR RATS place up to 5 blocks per bait point. Place a good number of bait points in dry locations throughout the infested area on runs, in burrows and where droppings are seen.

BAITING FOR MICE place one block per bait point. As mice are sporadic feeders use many bait points, 1-2 metres apart, wherever droppings, damage or other signs of activity are seen. ALWAYS place bait where it is inaccessible to children, animals and birds. Protect and cover bait for example, place baits in suitable trays or containers under cupboards, behind furniture etc. or use open-ended boxes, lengths of drainpipe or sheets of metal or wood secured at an angle against walls. Where appropriate, secure the bait block at its placement site to reduce the likelihood of its removal by rodents. Inspect baits frequently, replace eaten blocks, put back any moved blocks. If a bait point is completely consumed, the quantity should be increased. Continue replenishing baits until they are left untouched. Remove all remains of bait and bait containers and burn or bury.

PRECAUTIONS

AVOID ALL CONTACT BY MOUTH.

WASH HANDS AND EXPOSED SKIN before meals and after use.

STORE IN ORIGINAL CONTAINER, tightly closed, in a safe place.

EMPTY CONTAINER COMPLETELY and dispose of safely.

IF YOU FEEL UNWELL, seek medical advice (show the label where possible).

NOTE TO DOCTOR

Difenacoum is an indirect anticoagulant. Phytomenadione, Vitamin K1, is antidotal. Determine prothrombin times not less than eighteen hours after consumption. If elevated, administer Vitamin K1 in divided doses. Continue until prothrombin time normalises. After withdrawal of the antidote, continue determination of prothrombin time for two weeks and resume treatment if elevation occurs in that time.

NB Vitamin K3 is not effective.

This product is approved under The Control of Pesticides Regulations, 1986 for use as directed. HSE 6775.

Bitrex is a registered Trade Mark of MacFarlan Smith, Edinburgh.
