

DIRECTIONS FOR USE

Place blocks where there is a risk or suspicion of rodent activity, both inside and outside buildings of the infested area. Only place one or two blocks securely at each monitoring point. Place more monitoring points than you would place toxic baiting points to obtain a good activity profile of the rodents. Protect blocks from non-target animals and from water, preferably using tamper resistant bait stations. Fix the blocks in place using wire or a nail inside pieces of drainage pipe, under sections of slate, board or corrugated iron, securely weighted.

Make frequent inspections of the bait points. Careful examination of chewed blocks can reveal whether they have been eaten by rats, mice or even insects. Prepare your rodent control program and site toxic baits such as Rascal Difenacoum Wax Block Bait according to the information gathered from the use of Rascal Non-Tox Wax Block Bait. Unused or damaged blocks may be disposed of as non-toxic waste.

Nominal block weight 20g.

Safety Data Sheet available on request.

RASCAL

NON-TOXIC WAX BLOCK BAIT

5KG

Highly palatable, non-toxic block bait suitable for monitoring and pre-baiting.
