

4KG
200 BLOCKS APPROX.

NON-TOX BLOCKS

Highly palatable non-toxic block bait suitable for monitoring and pre-baiting

DIRECTIONS FOR USE

Place blocks where there are signs of rodent activity, both inside and outside buildings. Place blocks throughout the infested area. Only place one or two blocks securely at each monitoring point. Place more monitoring points than you would place toxic baiting points to obtain a good activity profile of the rodents. Protect blocks from non-target animals and from water, preferably using commercially available bait stations, such as the Rotech® and Rascal box range. Fix the blocks in place using wire or a nail inside pieces of drainage pipe, under sections of slate, board or corrugated iron, securely weighted, just as you would for a toxic bait block. Make frequent inspections of the bait points. Careful examination of chewed blocks can reveal whether they have been eaten by rats, mice or even insects. Prepare your rodent control program and site toxic baits such as Rascal/Rotech® Difenacoum Wax Block Bait according to the information gathered from the use of Rotech® Non-Tox Wax Block Bait. Unused or damaged blocks may be disposed of as non-toxic waste. Nominal block weight 20g.
