Revolutionary mode of action

Key to the efficacy of Outcast Ant is the indoxocarb ant bait. This highly attractive bait encourages worker ant feeding activity, which then carry the bait back to the colony nest. In the nest, the bait is quickly passed to other ants, the colony queen and larvae, to give control of colonies.

Furthermore, Outcast Ant bait is highly specific to target pests. It only becomes lethal once ingested, by specific enzymes naturally occurring in the ant's gut - the process of bio-activation. Pets and non-target organisms do not have the specific gut enzymes, and would therefore be unaffected by the bait.

Phase 1 Exposure

Target ant pests ingest Outcast Ant gel bait.

Phase 2 Enzymes

Enzymes in the ant's gut break down and bio-activate the bait molecule.

Phase 3 Active

Only then does the active become toxic to ants.

Phase 4 Death

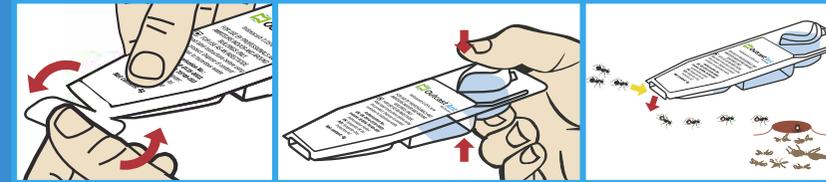

The molecule interrupts the ant's nervous system for an efficient kill.

Outcast Ant is highly effective against most common species of ant causing nuisance to homes and businesses, including the black garden ant (*Lasius niger*).

How to use Outcast Ant Bait Station

The quick and easy press-and-go Outcast Ant Bait Station can be used both indoors and outdoors around buildings. Suitable baiting points are best directed by professional pest controllers, as part of an overall ant control strategy for homes and businesses.

The simple to use bait station is instantly activated, by tearing off a tab and pressing the container bait chamber.

1 Snap-off the tab on the top of the bait station.

2 Squeeze the gel capsule to deposit the gel in the central compartment.

3 Place the bait station(s) in areas of ant infestation/activity.

The ant control bait remains contained within the bait station, where ants will readily feed. The gel bait stays moist and attractive to ant feeding - helping to achieve effective control of colonies.

When ant activity ceases, the Outcast Ant bait station is simply picked up and disposed of - with no mess to clear up and no bait left on the site.

Full instructions for use are provided as part of the packaging.

The use of Outcast Ant will help eliminate ants within days of application following label directions.
